DEVOPS ASSIGNMENT

Python Programming: Conditionals, Dictionaries and File Handling

Submitted by: Dilip Kumawat
Course: DevOps
Assignment: Python and Bash Programming

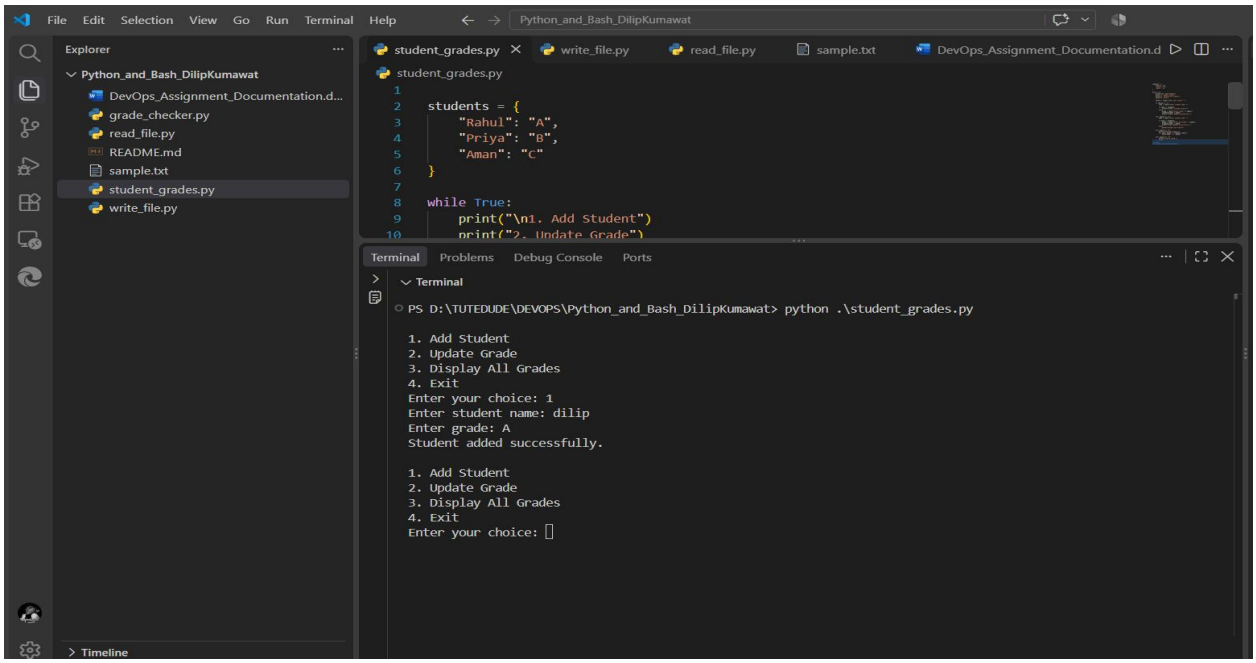

Task 1 — Grade Checker

Description: This program accepts a score from the user and assigns a grade based on the score range using conditional statements.

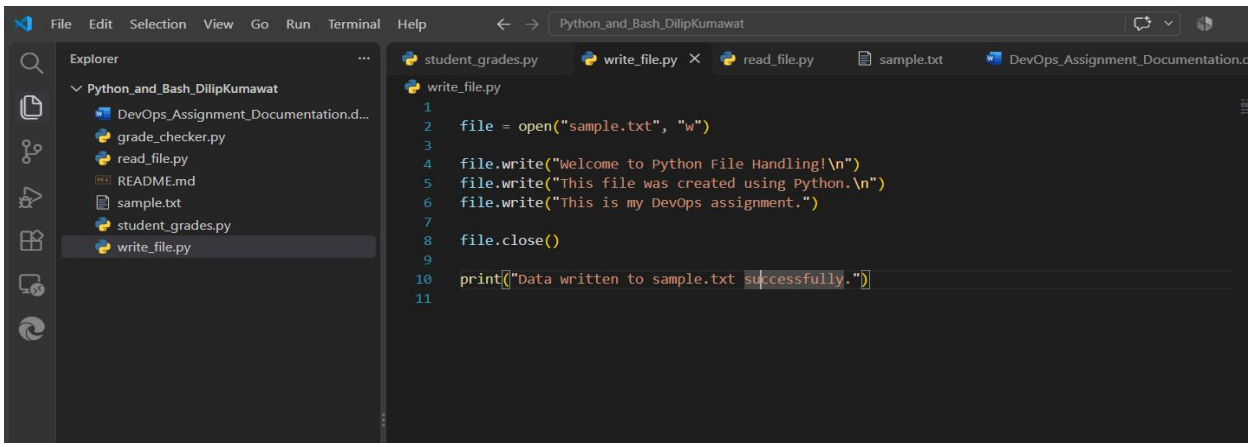

3. Task 2 — Student Grades

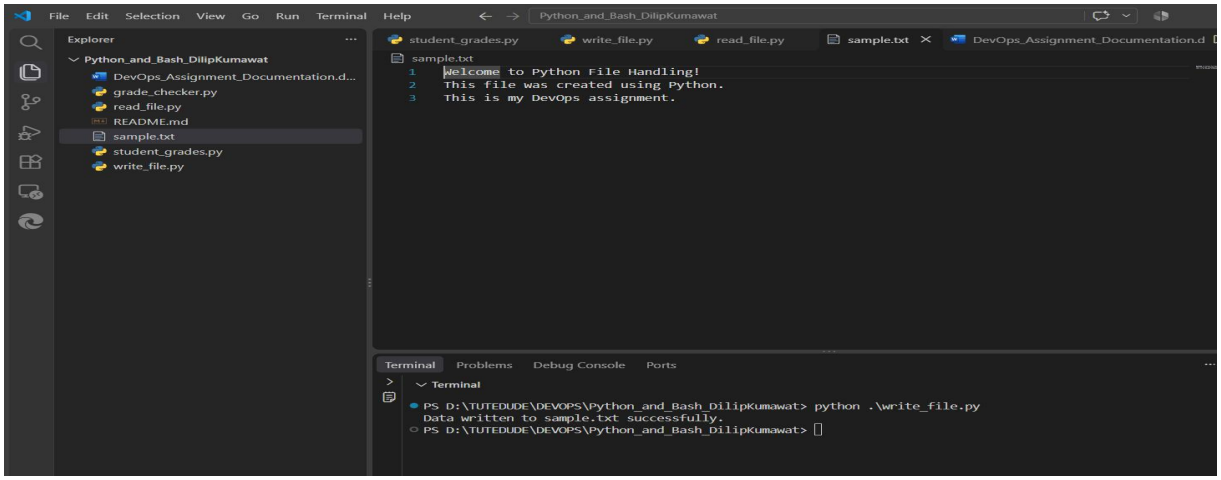

Description: This program uses a dictionary to store student names and grades. The user can add a student, update an existing grade, display all grades, or exit the program.

Task 3 — Write to a File

Description: This program creates a text file named sample.txt and writes multiple lines of text into it.

Task 4 — Read from a File

Description: This program opens sample.txt in read mode, reads the entire file using read(), and displays the contents in the terminal.
